## Data Sheet

### Description

These high gain series couplers use a Light Emitting Diode and an integrated high gain photodetector to provide extremely high current transfer ratio between input and output. Separate pins for the photodiode and output stage result in TTL compatible saturation voltages and high speed operation. Where desired the  $V_{CC}$  and  $V_O$  terminals may be tied together to achieve conventional photodarlington operation. A base access terminal allows a gain bandwidth adjustment to be made.

The 6N139, HCPL-0701, and HCNW139 are for use in CMOS, LSTTL or other low power applications. A 400% minimum current transfer ratio is guaranteed over 0 to 70°C operating range for only 0.5 mA of LED current.

The 6N138, HCPL-0700, and HCNW138 are designed for use mainly in TTL applications. Current Transfer Ratio (CTR) is 300% minimum over 0 to 70°C for an LED current of 1.6 mA (1TTL Unit load). A 300% minimum CTR enables operation with 1TTL Load using a 2.2 k $\Omega$  pull-up resistor.

### Functional Diagram

\* 5000 V rms/1 minute rating is for HCNW139/138 and Option 020 (6N139/138) products only. A 0.1  $\mu$ F bypass capacitor connected between pins 8 and 5 is recommended.

### Features

- High current transfer ratio – 2000% typical (4500 % typical for HCNW139/138)
- Low input current requirements – 0.5 mA
- TTL compatible output – 0.1 V  $V_{OL}$  typical
- Performance guaranteed over temperature 0°C to 70°C
- Base access allows gain bandwidth adjustment
- High output current – 60 mA
- Safety approval
  - UL recognized – 3750 V rms for 1 minute and 5000 V rms\* for 1 minute per UL 1577
  - CSA approved
  - IEC/EN/DIN EN 60747-5-5 approved with  $V_{IORM} = 1414 V_{peak}$  for HCNW139 and HCNW138
- Available in 8-Pin DIP or SOIC-8 footprint or widebody package
- MIL-PRF-38534 hermetic version available (HCPL-5700/1)

### Applications

- Ground isolate most logic families – TTL/TTL, CMOS/TTL, CMOS/CMOS, LSTTL/TTL, CMOS/LSTTL
- Low input current line receiver
- High voltage insulation (HCNW139/138)
- EIA RS-232C line receiver
- Telephone ring detector
- 117 V ac line voltage status indicator – low input power dissipation
- Low power systems – ground isolation

**CAUTION:** It is advised that normal static precautions be taken in handling and assembly of this component to prevent damage and/or degradation which may be induced by ESD. The components featured in this datasheet are not to be used in military or aerospace applications or environments.

Selection for lower input current down to 250  $\mu\text{A}$  is available upon request.

The HCPL-0701 and HCPL-0700 are surface mount devices packaged in an industry standard SOIC-8 footprint.

The SOIC-8 does not require “through holes” in a PCB. This package occupies approximately one-third the footprint area of the standard dual-in-line package. The lead profile is designed to be compatible with standard surface mount processes.

The HCNW139 and HCNW138 are packaged in a widebody encapsulation that provides creepage and clearance dimensions suitable for safety approval by regulatory agencies worldwide.

To order, choose a part number from the part number column and combine with the desired option from the option column to form an order entry.

Example 1:

6N138-560E to order product of 300 mil DIP Gull Wing Surface Mount package in Tape and Reel packaging with IEC/EN/DIN EN 60747-5-5 Safety Approval and RoHS compliant.

Example 2:

HCPL-0700 to order product of 300 mil DIP package in Tube packaging and non RoHS compliant.

Option datasheets are available. Contact your Avago sales representative or authorized distributor for information.

Remarks: The notation '#XXX' is used for existing products, while (new) products launched since July 15, 2001 and RoHS compliant will use '-XXxE'.

†The Input-Output Momentary Withstand Voltage is a dielectric voltage rating that should not be interpreted as an input-output continuous voltage rating. For the continuous voltage rating refer to the IEC/EN/DIN EN 60747-5-5 Insulation Characteristics Table (if applicable), your equipment level safety specification or Avago Application Note 1074 entitled "Optocoupler Input-Output Endurance Voltage."

### Notes:

1. DC CURRENT TRANSFER RATIO (CTR) is defined as the ratio of output collector current,  $I_{O1}$ , to the forward LED input current,  $I_F$ , times 100%.
2. Pin 7 Open.
3. Device considered a two-terminal device. Pins 1, 2, 3, and 4 shorted together and Pins 5, 6, 7, and 8 shorted together.
4. Use of a resistor between pin 5 and 7 will decrease gain and delay time. Significant reduction in overall gain can occur when using resistor values below 47 k $\Omega$ . For more information, please contact your local Avago Components representative.
5. Common mode transient immunity in a Logic High level is the maximum tolerable (positive)  $dV_{CM}/dt$  of the common mode pulse,  $V_{CM}$ , to assure that the output will remain in a Logic High state (i.e.,  $V_O > 2.0 \text{ V}$ ). Common mode transient immunity in a Logic Low level is the maximum tolerable (negative)  $dV_{CM}/dt$  of the common mode pulse,  $V_{CM}$ , to assure that the output will remain in a Logic Low state (i.e.,  $V_O < 0.8 \text{ V}$ ).
6. In applications where  $dV/dt$  may exceed 50,000 V/ $\mu\text{s}$  (such as static discharge) a series resistor,  $R_{CC}$ , should be included to protect the detector IC from destructively high surge currents. The recommended value is  $R_{CC} = 220 \Omega$ .
7. Use of a 0.1  $\mu\text{F}$  bypass capacitor connected between pins 8 and 5 adjacent to the device is recommended.
8. In accordance with UL 1577, each optocoupler is proof tested by applying an insulation test voltage 4500 V rms for 1 second (leakage detection current limit,  $I_{I-O} < 5 \mu\text{A}$ ). This test is performed before the 100% production test shown in the IEC/EN/DIN EN 60747-5-5 Insulation Related Characteristics Table, if applicable.
9. In accordance with UL 1577, each optocoupler is proof tested by applying an insulation test voltage > 6000 V rms for 1 second (leakage detection current limit,  $I_{I-O} < 5 \mu\text{A}$ ). This test is performed before the 100% production test for partial discharge (method b) shown in the IEC/EN/DIN EN 60747-5-5 Insulation Related Characteristics Table, if applicable.
